There's a bit of overlap from 3/10 to 3/11, but not much. It's understandable those specific sample results differ. Good that all the results are in the same ballpark. No drastic differences.

Thanks for your review Ruben,

If I get no comments from OECA, I will send this on to Steve T who will send it up. If I hear feedback from OECA, I will make sure to include you on that feedback, so you know exactly what my management will be sharing.

So with the data in hand so far, there are no true overlapping days, which would account for the differences in sample results. That's a good reason to go with the averages as discussed in your fact sheet.

As soon as I get new data, I'll pass it on.

Ruben,

Attached is a crosswalk spreadsheet and updated fact sheet for David. Can you please review and let me know if you have edits or suggestions. Steve T is okay with sending to David, but he also wants to make sure our programs are in agreement. Thanks

Two things to note. David asked us to elaborate on our Invalid explanation. I edited our Invalid key, but this will be different from the community monitoring results invalid explanation. Also, to crosswalk the data as accurately as possible, the date on the crosswalk spreadsheet has date adjusted to the sample start date as well as canister start times. This is only for clarification and internal comparison (do not recommend adding our SPod trigger start times in the future). All collocated or replicate samples were averaged, and one representative sample result is used for averaging. Additionally, ND were averaged using ½ the MDL.
